This invention relates to a vaccine composition which contains BASB070 polypeptides from Haemophilus influenzae and/or the nuclectide sequences that encode them. BASB070 DNA sequences encode proteins which are integral outer membrane proteins with a beta-barrel conformation. The integral outer membrane proteins with a beta-barrel conformation. The integral outer membrane proteins with a beta-barrel conformation. The invention includes BASB070 nucleotide and protein sequences from expression vector and recombinant live microorganism comprising a BASB070 polynucleotide sequence, a process for the production of a BASB070 polynucleotide sequence, a process for the production of a BASB070 polynucleotide sequence, a common cause of pneumonia, exacerbation of Haemophilus influenzae is a common cause of pneumonia, exacerbation of chronic bronchitis, sinusitis and ostemic mid is meaned in the preparation of an agent for use in generating an immunological response in a mammal.

The present sequence represents a BASB070 protein isolated from the production of the incluence strains. 15; Vaccinating against Haemophilus influenzae using BASB070 polypeptides and/or the nucleic acids that encode them -325 466 60 ARAVSTRODIFKSSENLDNIVRSIPGAFTQQDKSSGIVSLNIRGDSGFGRVNTMVDGITQ 119 287 Gaps 1 MRSSFRLKPICFYLMGVMLYHHSYAEDAGRAGSEAQI-QVLEDVHVKAKRVPKDKKVFTD LKQQSAGNLFKLEYDGVFNKYTAQFRDLNTKIGSRKIINRNYQFNYGLSLNSYANLNLTA 240 GQHIGNFGAEYLERRKQRYFVQEGGLKFNSNSGKWERDFQRPYWKTKW--YQKYND----230 gerlaslggdilakekeayfrnagyil--npeggwtpdlskkhwscnkpdygkngdcsyy -----PQELQKY-----IEGHDKSWRENLAPQYDITPIDPSS 386 AYNSGROKYPKGSKFTGWGLLKDFETYNNAKILDLNNTATFRLPRETELQTTLGFNYFHN 180 VQGNNTYGLLLKGLTGTNSTKGNAMAAIGARKWLESGASVGVLYGHSRRSVAQNYRVGGG Length 913; DB 21; 51.3%; Score 2514.5; DB 21 ilarity 51.3%; Pred. This invention relates to a vaccine composition which contains BASB070 polypeptides from Haemophilus influenzae and/or the nucleotide sequences that encode them. BASB070 DNA sequences encode proteins which are invention includes BASB070 nucleotide and protein sequences from H. influenzae strains RdKW20 and ntHi3224. The invention includes and recombinant live microorganism comprising a BASB070 polynucleotide sequence, a process for the production of a BASB070 polynucleotide sequence, a process for the production of a BASB070 protein, an antibody specific for the two BASB070 proteins of the invention, and a method for diagnosing an H. influenzae infection. Haemophilus influenzae is a common cause of promemonia, exacerbation of chronic bronchitis, sinusitis and systemic diseases. The vaccine exhibits causes bacterial meningitis and systemic diseases. The vaccine exhibits antibacterial activity, and is used in the preparation of an agent for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vaccinating against Haemophilus influenzae using BASB070 polypeptides and/or the nucleic acids that encode them -

They are encoded by open reading frames (ORFS) AAAT1972-212358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningils, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                          Proteins from Neisseria meningitidis and N. gonorrhoeae useful diagnosis, treatment and prevention of infection

The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used treat, palliate or prevent extra-intestinal E. coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicacemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and and encoded proteins (ABB52499-ABB52914-ABB53094) of nature B2/D+A. The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, pallate or prevent extra intestinal E. colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                126 ttthgstnnmagvlidpnllvavdvtrgdssgseginalagsanmrtigvddvifngnty 185

```

This sequence represents the transferrin binding protein from Neisseria gonorrheae. Transferrin is an iron-regulated, outer membrane protein involved in uptake of iron, an essential nutrient for the growth of N. gonorrheae and N. meningitidis.

N. gonorrheae and N. meningitidis.

Is shown in AAY07477. N. gonorrheae and N. meningitidis are two pathogens of the genus Neisseria that are genetically similar, but pathologically different. The growth of these cells can be inhibited by reducing the ability of these cells to take up iron, e.g. by blocking the transferrin receptor function. The transferrin binding proteins can be used to raise antibodies for inhibiting the activity of the transferrin

encoding an immunogenic, C-terminally truncated analog of one of the transferrin receptor proteins Tbpl or Tbp2 of Haemophilus influenzae which has antibacterial activity. (I) are used for recombinant production of truncated Tbp; as probes and primers for detecting, and diagnosing infection by, Haemophilus, also for isolating similar sequences from other bacteria; as immunogens for vaccinating against infections caused by bacteria that produce transferrin receptors, e.g. Haemophilus, Neisseria or Branhamella. The truncated proteins are useful immunoassays) and for raising antibodies, used for diagnosis of infections or for passive immunization. This sequence represents the transferrin receptor protein Tbp1 isolated from Neisseria gonorrheae strain FA19.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         379

Score

Result No.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"happ. a gene encoding a second Haemophilus influenzae hemoglobin- and
hemoglobin-haptoglobin-binding protein.";
infect. Immun. 66:4733-4741(1998).
                                                                                                                                                                                                                                                            in
                                                                                                                                                                                                                                                                                                                 FOR HEME UPPRAKE.

SUBCELLULAR LOCATION: OUTER membrane.

MISCELLANGOUS: THIS PROTEIN IS SUBJECT TO PHASE-VARIABLE

EXPRESSION ASSOCIATED WITH ALTERATION IN THE LENGTH OF THE CCAA

REPEAT REGION. THIS MECHANISM IS CALLED SLIPPED-STRAND MISPAIRING.

BADITION OR LOSS OF CCAA REPEAT UNITS WOULD CHANGE THE READING

FRAME AND RESULT IN INTRODUCTION OF STOP CODONS DOWNSTREAM OF THE

REPEAT REGION. THIS MAY BE A MECHANISM OF REGULATION AND A

WAY TO AVOID THE IMMUNICATION RESPONSE OF THE HOST.
                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: BELONGS TO THE TONB-DEPENDENT RECEPTOR PROTEIN FAMILY; HEMOGLOBIN/HAPTOGLOBIN BINDING PROTEIN SUBFAMILY.
                                                                                                                                                                                                                                                                                Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: ACTS AS A RECEPTOR FOR HEMOGLOBIN OR THE HEMOGLOBIN/HAPTOGLOBIN COMPLEX OF THE HUMAN HOST AND IS REQUIRED
                                                                                                                                                                                                                                                           "Conservation of hemoglobin/hemoglobin-haptoglobin binding proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HEMOGLOBIN AND HEMOGLOBIN-HAPTOGLOBIN

-!- SUBCELLULAR LOCATION: Outer membrane.

-!- SUBCELLULAR LOCATION: Outer membrane.

-!- SUBCELLULAR LOCATION: Outer membrane.

-!- SUBCELLULAR SOCIATED WITH ALTERATION IN THE LENGTH OF THE CCAA REPEAT REGION. THIS MECHANISM IS CALLED SLIPPED-STRAND MISPAIRING. ADDITION OR LOSS OF CCAA REPEAT UNITS WOULD CHANGE THE READING FRAME AND RESULT IN INTRODUCTION OF STOP CODONS DOWNSTREAM OF THE REPEAT REGION. THIS MAY BE A MECHANISM OF REGILATION AND A WAY TO AVOID THE IMMUNDLOGICAL RESPONSE OF THE HOST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: BELONGS TO THE TONB-DEPENDENT RECEPTOR PROTEIN FAMILY; HEMOGLOBIN/HAPTOGLOBIN BINDING PROTEIN SUBFAMILY.

Lifect. Immun. 68:4024-4101(2000)

Infect. Immun. 68:4024-4101(2000)

IS REQUIRED FOR HEME UPTARE.

C. -! SUBCELLULAR LOCATION: Outer membrane.

C. -! MISCELLANEOUS: THIS PROTEIN IS SUBJECT TO PHASE-VARIABLE EXPRESSION ASSOCIATED WITH ALTERATION IN THE LENGTH OF THE CCAA REPEAT REGION. THIS MECHANISM IS CALLED SLIPPED-STRAND MISPAIRING.

C. ADDITION OR LOSS OF CCAA REPEAT UNITS WOULD CHANGE THE READING FRAME AND RESULT IN INTRODUCTION OF STOP CODONS DOWNSTREAM OF THE REPEAT REGION. THIS MAY BE A MECHANISM OF REGULATION AND A WAY TO AVOID THE IMMUNICACICAL RESPONSE OF THE, HOST.

C. -! SIMILARITY: BELONGS TO THE TONB-DEPENDENT RECEPTOR PROTEIN FAMILY;

C. HEMOGLOBIN/HAPTOGLOBIN BINDING PROTEIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -----TGOGINRFYAPG 1002

FOR HEME UPTAKE (BY SIMILARITY).

-:- SUBCELLULAR LOCATION: Outer membrane (By similarity).

-:- MISCELLANEOUS: THIS PROTEIN IS SUBJECT TO PHASE-VARIABLE EXPRESSION ASSOCIATED WITH ALTERATION IN THE LENGTH OF THE CCAA REPEAT REGION. THIS MECHANISM IS CALLED SLIPPED-STRAND MISPARING.

REPEAT REGION. THIS MECHANISM IS CALLED SLIPPED-STRAND MISPARING. ADDITION OR LOSS OF CCAA REPEAT UNITS MOULD CHANGE THE READING FRAME AND RESULT IN INTRODUCTION OF STOP CODONS DOWNSTRRAM OF THE REPEAT REGION. THIS MAY BE A MECHANISM OF RECULATION AND A WAY TO AVOID THE IMMUNOLOGICAL RESPONSE OF THE HOST (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE TONB-DEPENDENT RECEPTOR PROTEIN!

-!- CAUTION: THIS IS A CONCEPTUAL TRANSLATION; TWO FRAMESHIFTS WERE INTRODUCED IN THE REPEATS RESION AND IN THE LEADER PEPTIDE TO MAXIMIZE THE SIMILARITY WITH OTHER ORTHOLOGS.
                                                                                                                                                                                                                                                                                  between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. FOR HEME UPTAKE (BY SIMILARITY).

FOR HEME UPTAKE (BY SIMILARITY).

SUBCELLULAR LOCATION: Outer membrane (By similarity).

MISCELLULAR LOCATION: Outer membrane (By similarity).

MISCELLULAR LOCATION: Outer membrane (By similarity).

MISCELLULAR LOCATION: OUTER MEDITARIA DEFENDENCE TO PHASE-VARIBBLE EXPRESSION ASSOCIATED WITH ALTERATION IN THE LENGTH OF THE CCAA REPEAT REGION. THIS MECHANISM IS CALLED SILPED-STRAND MISPAIRING.

ADDITION OR LOSS OF CCAA REPEAT UNITS WOULD CHANGE THE READING FRAME AND RESULT IN INTRODUCTION OF STOP CODON'S DOWNSTREAM OF THE REPEAT REGION. THIS MAY BE A MECHANISM OF REGULATION AND A WAY TO AVOID THE IMMUNOLOGICAL RESPONSE OF THE HOST (BY SIMILARILY).

CAUTION: THIS IS A CONCEPTUAL TRANSLATION; THE SEQUENCE WAS ILLORGAND OF THE SELONGST THE SIMILARILY.

CAUTION: THIS IS A CONCEPTUAL TRANSLATION; THE SEQUENCE WAS INTRODUCED IN THE REPEATS REGION TO MAXIMIZE THE SIMILARITY WITH OTHER ORTHOLOGS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright.
